Reasons for Allowance

COMES Now the Patent Office and opines at least a reason for the Allowance for this Application to wit: that the no teaching or reasonable combination of teachings in the prior art disclose or suggest a method of fabricating a printed wire board (PWB) which include the steps of packing an interlayer connecting material in a via-hole formed in an insulator film, interconnecting electrically a plurality of conductor patterns with a conductive compound formed by hot pressing the interlayer connecting material in the via hole between a plurality of conductive patterns wherein the interconnecting process includes hot-pressing the insulator film to deform the insulator film to protrude into the via hole, thereby forming an inclination of a side wall of the conductive compound, which is adjacent to an area contacting the conductor pattern against the conductor pattern in such a manner that the farther from the conductor patterns on the side wall the closer to the center axis of the via hole.
